Subject RE: Selected BC Labs for Omega Soil Samples

Thanks for the prompt response. I have forwarded all QA/QC requirements to BC Labs.

Sharon

Sharon,

I spoke to Dave Taylor about BC Labs this afternoon. He isn't familiar with them and that being the case, would need to see their QA Plan and/or SOPs before he can comment. Since you have EPA-approved planning documents that include laboratory requirements, you are still OK to proceed with the work as long as the laboratory adheres to those requirements. Let me know if you have any questions.

Chris

Subject: Selected BC Labs

Hi Chris - I'd like to notify you that we have selected BC Labs for analysis of the Omega soil samples. Our chemist and QA/QC manager, Barbara Wells, has worked with them and is satisfied with the quality of their work. They are a well established, California-certified environmental lab. I can provide contact information for the laboratory if you would like.

Air Toxics has been selected for analysis of all air and soil gas samples, which will be collected in Summa Canisters. We will continue to use Del Mar Analytical for analysis of all groundwater samples. Please let me know if use of BC Labs for soil sample analysis is acceptable to EPA.

Regards, Sharon
